Annual Distribution Fee (trailing compensation)	0.85%
Advisor Fees	
Management Fee	1.10% per annum of NAV, payable monthly
Performance Participation Allocation	12.5% of the annual total return, subject to a 5% hurdle amount and a high-water mark

Risk Factors

- Past performance is not a guarantee of future results. Investing in shares of Black Creek Diversified Property Fund (DPF) common stock involves a high degree of risk.
- Investing in real estate assets entails certain risks, including changes in: the economy, supply and demand, laws, tenant turnover, interest rates (including periods of high interest rates), availability of mortgage funds, operating expenses and cost of insurance. This investment will offer limited liquidity options to investors. There is no guarantee of any return on investment and stockholders may lose the amount they invest. Real estate investment trusts (REITs) are not suitable for all investors.
- An investment in DPF is not a direct investment in commercial real estate, but rather an investment in a REIT that owns commercial real estate.
- Further, investing in DPF stock involves additional and substantial risks specific to DPF, including, among others, that:
 - i. There is no public trading market for shares of DPF's common stock, and DPF does not expect that there will ever be a public trading market for its shares, so redemption of shares by them will likely be the only way to dispose of your shares.
 - ii. DPF's redemption program imposes limits on redemptions. DPF may amend, suspend or terminate its share redemption program at any time. As a result, DPF's shares have only limited liquidity and may become illiquid. Beginning in the first quarter of 2009 through the third quarter of 2016, redemption requests for Class E shareholders exceeded the redemption limits set forth in DPF's Class E share redemption program and associated offering materials, which during that time frame was limited to a 5% per year cap and other limitations with respect to Class E shareholders and DPF conducted a number of self-tender offers to supplement this liquidity. As a result, investors who sought to redeem their Class E shares during that period only received a portion of the proceeds they requested, either through the redemption program or self-tender offers that were conducted by DPF, and were required to resubmit redemption requests periodically in order to renew their request to either have their shares tendered or purchased pursuant to a tender offer. During this time period, these Class E shareholders did continue to receive distributions on the shares they retained.
 - iii. The purchase and redemption price for shares of DPF's common stock will be generally based on the NAV of each class of common stock and will not be based on any public trading market. DPF's NAV will not represent DPF's enterprise value and may not accurately reflect the actual prices at which DPF's assets could be liquidated on any given day, the value a third party would pay for all or substantially all of DPF's shares, or the price that DPF's shares would trade at on a national stock exchange. The board of directors may amend DPF's NAV procedures from time to time.
 - iv. Some of DPF's executive officers and directors and other key personnel are also officers, directors, managers, key personnel and / or holders of an ownership interest in its advisor, its dealer manager and / or other entities related to its advisor. As a result, they face conflicts of interest, including but not limited to conflicts arising from time constraints, allocation of investment opportunities and the fact that the fees its advisor will receive for services rendered to DPF will be based on DPF's NAV, the procedures for which its advisor will assist its board of directors in developing, overseeing, implementing and coordinating.
 - v. If DPF fails to maintain its status as a REIT, it would adversely affect its results of operations and its ability to make distributions to its stockholders.
 - vi. The amount of distributions DPF may make is uncertain, is not guaranteed and may be modified at the program's discretion. DPF may pay distributions from sources other than cash flow from operations including, without limitation, the sale of assets, borrowings or offering proceeds (including the return of principal amounts invested). The use of these sources for distributions would decrease the amount of cash DPF has available for new investments, repayment of debt, share redemptions and other corporate purposes, and could potentially reduce your overall return and dilute the value of your investment in shares of DPF common stock. For each year from 2012 through 2017 cash flow from operations exceeded total distributions. However, within these years, during the three months ended March 31, 2016 and December 31, 2017, cash flows from operations were 95.3% and 79.1% of total distributions, respectively.
 - vii. DPF's use of leverage increases the risk of loss on its investments.
 - viii. The payment of fees by DPF to its advisor and its dealer manager will reduce the cash available for distribution and will increase the likelihood that investors are unable to recover the amount of their investment in DPF.
 - ix. In connection with DPF's offering, it incurs fees and expenses. In particular, DPF expects to incur a dealer manager and distribution fee which are expected to reduce the amount of distributions received by certain investors and as a result will lower the overall return to such investors. Also, DPF has and expects to continue to incur organizational and offering related expenses which reduce the overall cash flow of DPF and negatively impact its NAV and could negatively impact your overall return.

This material must be read in conjunction with the DPF prospectus in order to understand fully all of the implications and risks of the offering of securities to which it relates. This document must be preceded or be accompanied by a prospectus, which contains important information about DPF. This is neither an offer to sell nor a solicitation of an offer to buy the securities described in the DPF prospectus. The offering is being made only by the DPF prospectus. Neither the Securities and Exchange Commission nor any other state securities regulator has approved or disapproved of the securities or determined if the prospectus is truthful or complete. In addition, the Attorney General of the State of New York has not passed on or endorsed the merits of the offering. Any representation to the contrary is unlawful. DPF is not an investment company registered under the Investment Company Act of 1940.

Please be aware that DPF, Black Creek Diversified Property Advisors LLC, Black Creek Diversified Property Advisors Group LLC, Black Creek Capital Markets, LLC and their respective officers, directors, employees and affiliates are not undertaking to provide impartial investment advice or to give advice in a fiduciary capacity in connection with DPF's public offering or the purchase of DPF's common stock and that the Advisor and the Dealer Manager have financial interests associated with the purchase of DPF's common stock, as described in DPF's prospectus, including fees, expense reimbursements and other payments they anticipate receiving from DPF in connection with the purchase of DPF's common stock. These materials are not intended as a recommendation to make an investment in DPF's common stock and investors should consult their financial advisors before making an investment decision.

- ¹ There can be no assurance that these objectives will be met through an investment in DPF.
- ² The amount of distributions DPF may make is uncertain, is not guaranteed, may be modified at the program's discretion, and is subject to board approval. DPF may pay distributions from sources other than cash flow from operations including, without limitation, the sale of assets, borrowings or offering proceeds (including the return of principal amounts invested). The use of these sources for distributions would decrease the amount of cash DPF has available for new investments, repayment of debt, share redemptions and other corporate purposes, and could potentially reduce your overall return and dilute the value of your investment in shares of DPF common stock. Because borrowed funds were used to pay distributions, the distribution rate may not be sustainable. For each year from 2012 through 2017 cash flow from operations exceeded total distributions. However, within these years, during the three months ended March 31, 2016 and December 31, 2017, cash flows from operations were 95.3% and 79.1% of total distributions, respectively. Although distribution coverage on the basis of cash flow from operations is a required disclosure, this metric includes non-core sources of cash flow (e.g., accrued interest from debt investments and gains on asset sales) in addition to core sources of cash flow (e.g., rental income) and may not be the most indicative metric to measure distribution coverage.
- ³ DPF's Adjusted Funds From Operations ("AFFO") highlight the portfolio's ability to generate cash flow from core business functions such as property income after accounting for property-related capital expenditures and other relevant adjustments. Given recent developments within DPF's portfolio, AFFO has not covered the amount of distributions for the quarters ended December 31, 2016, March 31, 2017, June 30, 2017, September 30, 2017 and December 31, 2017. Furthermore, continued elevation in property-level capital expenditures for DPF will likely result in an inability for the portfolio to fully cover future distributions from AFFO in the near-to-intermediate term.
- ⁴ Diversification does not assure a profit or protect against loss in a declining market.
- ⁵ Measured by fair value, real property only.
- ⁶ Total principal outstanding under DPF's total borrowings, divided by the fair value of DPF's real property and debt investments.
- ⁷ Minimum investment may vary by state.
- ⁸ Performance is measured by total return, which includes income and appreciation. Total return represents the compound annual rate of return assuming reinvestment of all distributions. Past performance is not a guarantee of future results. Performance data quoted above is historical. Current performance may be higher or lower than the performance data quoted.
- ⁹ The performance data does not reflect the deduction of taxes that a shareholder would pay on fund distributions or the sale of fund shares, as applicable. The NAV is based on estimated values. Please see the NAV Methodology page at blackcreekdiversified.com for more detailed information. The Class T Share is offered with an up to 3.5% up-front sales charge to investors through registered broker / dealers, which will affect the above returns and future returns depending on the investor's hold period.
- ¹⁰ Represents (i) the distributions declared on December 11, 2017 for February 2018, adjusted for class specific fees if applicable, divided by (ii) 02/28/18 NAV. The resulting amount is multiplied by twelve to present such yield on an annualized basis and assumes that distributions of the same amount are paid in twelve consecutive months and that the NAV per share at the end of each month remains the same.
- ¹¹ As of 02/28/18, the Sharpe Ratio is a measure for calculating risk-adjusted return, and is calculated by subtracting the risk-free rate — such as that of the 3-Month Treasury Bill — from the rate of return for a portfolio and dividing the result by the standard deviation of the portfolio returns.
- ¹² None of the tenants named have endorsed Black Creek Diversified Property Fund or its public offering. The names are included only for purposes of your evaluation of the quality of the tenant base of the properties owned and operated by Black Creek Diversified Property Fund.
- ¹³ NAV inception is September 30, 2012. The historical returns presented show share performance since September 30, 2012, which is when DPF first sold Class A, W and I shares after converting to an NAV REIT on July 12, 2012. Subsequently, as a result of a share restructuring effective as of September 1, 2017, DPF's outstanding Class A, W and I shares changed to Class T, Class D and a new version of Class I shares, respectively. DPF also created a new Class S share, with the same NAV per share and class-specific expenses as Class T shares. Accordingly, in this table, the return of the new version of Class T shares reflects the performance of the Class A shares since NAV inception through the restructuring date. In connection with the restructuring, DPF also revised its fee structure with its advisor and dealer manager and its NAV methodology, which will affect returns going forward. Please see DPF's definitive proxy statement filed with the Securities and Exchange Commission on June 7, 2017, for more information about the fee changes and our pro forma estimates of how those fee changes would have affected returns on DPF shares in the years 2013-2016. Investors in DPF's fixed price offerings prior to NAV inception on September 30, 2012 are likely to have a lower return.
- ¹⁴ Income is defined as distributions primarily paid from sources such as cash flow from operations, but can also include, without limitation, the sale of assets, borrowings or offering proceeds (including the return of principal amounts invested).
- ¹⁵ Appreciation is the return derived from changes in the NAV.
